

## Mini58 CMSIS BSP Directory

Directory Introduction for 32-bit NuMicro® Family

### Directory Information

<b>Document</b>	Driver reference manual and revision history.
<b>Library</b>	Driver header and source files.
<b>SampleCode</b>	Driver sample code.

*The information described in this document is the exclusive intellectual property of Nuvoton Technology Corporation and shall not be reproduced without permission from Nuvoton.*

*Nuvoton is providing this document only for reference purposes of NuMicro microcontroller based system design. Nuvoton assumes no responsibility for errors or omissions.*

*All data and specifications are subject to change without notice.*

## 1 Document Information

<b>NuMicro Mini58 Series CMSIS BSP Revision History.pdf</b>	This document shows the revision history of Mini58 BSP.
<b>NuMicro Mini58 Driver Reference Guide.chm</b>	This document describes the usage of drivers in Mini58 BSP.

## 2 Library Information

<b>CMSIS</b>	Cortex <sup>®</sup> Microcontroller Software Interface Standard (CMSIS) V3.01 definitions by ARM <sup>®</sup> Corp.
<b>Device</b>	CMSIS compliant device header file.
<b>StdDriver</b>	All peripheral driver header and source files.

### 3 Sample Code Information

<b>Hard_Fault_Sample</b>	Show hard fault information when hard fault happened.
<b>RegBased</b>	Sample code implemented without access standard library but access registers directly.
<b>Semihost</b>	Show how to print and get character with IDE console window.
<b>StdDriver</b>	Demonstrate the usage of Mini58 MCU peripheral driver APIs.
<b>Template</b>	A project template for Mini58 MCU.

## 4 \SampleCode\RegBased

<b>ACMP</b>	Demonstrate Analog comparator (ACMP) comparison by comparing CPP0 (P1.5) with Band-gap voltage and shows the result on UART console.
<b>ACMP_TriggerTimerCapture</b>	Show how to use Analog comparator (ACMP) state change to trigger timer capture function. P1.5 is used as comparator positive input and Band-gap voltage as negative input.
<b>ADC_Compare</b>	Demonstrate ADC conversion and comparison function by monitoring the conversion result of channel 0.
<b>ADC_Convert</b>	Demonstrate ADC function by repeatedly convert the input of ADC channel 0 (P5.3) and shows the result on UART console.
<b>ADC_PWMTrigger</b>	Demonstrate PWM0 channel 0 trigger ADC function.
<b>ADC_SequentialMode</b>	Demonstrate ADC PWM Sequential Mode conversion and shows the result on UART console.
<b>FMC_RW</b>	Show FMC read flash IDs, erase, read, and write functions.
<b>GPIO</b>	Use GPIO driver to control the GPIO pin direction, control their high/low state, and how to use GPIO interrupts.
<b>I2C_FIFO_EEPROM</b>	Read/write EEPROM via I <sup>2</sup> C interface using FIFO mode.
<b>I2C_Interrupt_EEPROM</b>	Read/write EEPROM via I <sup>2</sup> C interface using interrupt mode.
<b>I2C_Polling_EEPROM</b>	Read/write EEPROM via I <sup>2</sup> C interface using polling mode.
<b>I2C_Software_GPIO</b>	Demonstrate how to use GPIO pins to simulate I <sup>2</sup> C interface.
<b>PWM_DeadZone</b>	Demonstrate the dead-zone feature with PWM.
<b>PWM_DoubleBuffer</b>	Demonstrate the PWM double buffer feature.
<b>PMW_MaskAlign</b>	Show how to generate 0%, 50% and 100% PWM duty

	cycle.
<b>PWM_PreciseCenterAligned Mode</b>	Demonstrate PWM precise center aligned feature.
<b>SPI_LoopBack</b>	Demonstrate SPI function by connect MOSI (P0.5) with MISO (P0.6)
<b>SYS_PLLClockOutput</b>	Change system clock to different PLL frequency and output system clock from CLK0 pin.
<b>Timer_EventCounter</b>	Use pin P3.4 to demonstrates timer event counter function.
<b>Timer_FreeCountingMode</b>	Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.
<b>Timer_Periodic</b>	Use the timer periodic mode to generate timer interrupt every 1 second.
<b>Timer_ToggleOut</b>	Demonstrate the timer 0 toggle out function on pin P3.4.
<b>Timer_TriggerCountingMode</b>	Use the timer pin P3.2 to demonstrate timer trigger counting mode function. And displays the measured input frequency to UART console.
<b>Timer_Wakeup</b>	Use Timer to wake up system from Power-down mode periodically.
<b>UART_AutoFlow</b>	Show how to transmit and receive data using auto flow control.
<b>UART_IrDA</b>	Show how to transmit and receive UART data in UART IrDA mode.
<b>UART_RS485</b>	Transmit and receive data in UART RS485 mode.
<b>UART_TxRx_Function</b>	Transmit and receive data from PC terminal through RS232 interface.
<b>WDT_Polling</b>	Use polling mode to check WDT time-out state and reset WDT after time out occurs.
<b>WDT_Wakeup</b>	Use WDT to wake up system from Power-down mode periodically.

**WWDT\_Reload**

Demonstrate the WWDT counter reload function.

## 5 \SampleCode\StdDriver

<b>ACMP</b>	Demonstrate Analog comparator (ACMP) comparison by comparing CPP0 (P1.5) with Band-gap voltage and shows the result on UART console.
<b>ACMP_TriggerTimerCapture</b>	Show how to use Analog comparator (ACMP) state change to trigger timer capture function. P1.5 is used as comparator positive input and Band-gap voltage as negative input.
<b>ADC_Compare</b>	Demonstrate ADC conversion and comparison function by monitoring the conversion result of channel 0.
<b>ADC_Convert</b>	Demonstrate ADC function by repeatedly convert the input of ADC channel 0 (P5.3) and shows the result on UART console.
<b>ADC_PWMTrigger</b>	Demonstrate PWM0 channel 0 trigger ADC function.
<b>ADC_SequentialMode</b>	Demonstrate ADC PWM Sequential Mode conversion and shows the result on UART console.
<b>FMC_RW</b>	Show FMC read flash IDs, erase, read, and write functions.
<b>GPIO</b>	Use GPIO driver to control the GPIO pin direction, control their high/low state, and how to use GPIO interrupts.
<b>I2C_FIFO_EEPROM</b>	Read/write EEPROM via I <sup>2</sup> C interface using FIFO mode.
<b>I2C_Interrupt_EEPROM</b>	Read/write EEPROM via I <sup>2</sup> C interface using interrupt mode.
<b>I2C_Polling_EEPROM</b>	Read/write EEPROM via I <sup>2</sup> C interface using polling mode.
<b>I2C_Software_GPIO</b>	Demonstrate how to use GPIO pins to simulate I <sup>2</sup> C interface.
<b>PWM_DeadZone</b>	Demonstrate the dead-zone feature with PWM.
<b>PWM_DoubleBuffer</b>	Demonstrate the PWM double buffer feature.
<b>PMW_MaskAlign</b>	Show how to generate 0%, 50% and 100% PWM duty

	cycle.
<b>PWM_PreciseCenterAligned Mode</b>	Demonstrate PWM precise center aligned feature.
<b>SPI_LoopBack</b>	Demonstrate SPI function by connect MOSI (P0.5) with MISO (P0.6)
<b>SYS_PLLClockOutput</b>	Change system clock to different PLL frequency and output system clock from CLK0 pin.
<b>Timer_EventCounter</b>	Use pin P3.4 to demonstrates timer event counter function.
<b>Timer_FreeCountingMode</b>	Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.
<b>Timer_Periodic</b>	Use the timer periodic mode to generate timer interrupt every 1 second.
<b>Timer_ToggleOut</b>	Demonstrate the timer 0 toggle out function on pin P3.4.
<b>Timer_TriggerCountingMode</b>	Use the timer pin P3.2 to demonstrate timer trigger counting mode function. And displays the measured input frequency to UART console.
<b>Timer_Wakeup</b>	Use Timer to wake up system from Power-down mode periodically.
<b>UART_AutoFlow</b>	Show how to transmit and receive data using auto flow control.
<b>UART_IrDA</b>	Show how to transmit and receive UART data in UART IrDA mode.
<b>UART_RS485</b>	Transmit and receive data in UART RS485 mode.
<b>UART_TxRx_Function</b>	Transmit and receive data from PC terminal through RS232 interface.
<b>WDT_Polling</b>	Use polling mode to check WDT time-out state and reset WDT after time out occurs.
<b>WDT_Wakeup</b>	Use WDT to wake up system from Power-down mode periodically.

**WWDT\_Reload**

Demonstrate the WWDT counter reload function.

### **Important Notice**

**Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, "Insecure Usage".**

**Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.**

**All Insecure Usage shall be made at customer's risk, and in the event that third parties lay claims to Nuvoton as a result of customer's Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.**
